Software Engineer — Full-Stack (C++/React) & ML (PyTorch, Cloud Run) — Enterprise Software, Computer Vision, XR/VR

EDUCATION

University of Cincinnati — Cincinnati, OH

Aug 2021 – May 2026

Bachelor of Science in Computer Science; GPA: 3.774

- Honors: Magna Cum Laude, Cooperative Education & Practice Excellence
- Dean's List: Spring 2022, Spring 2023, Fall 2023, Summer 2024, Spring 2025, Fall 2025, Spring 2026

TECHNICAL SKILLS

Languages: C++, C#, Java, Python, SQL (PostgreSQL), JavaScript, HTML/CSS

Frameworks & Cloud: React, Flask, Node.js, REST APIs, Google Cloud Platform (Cloud Run)

ML & Data: PyTorch, Torchvision, ResNet, pandas, NumPy, Matplotlib

Tools & Systems: Linux, Git, Docker, VS Code, Visual Studio, Unity Engine, Teamcenter (SOA/BOM)

EXPERIENCE

Software Engineer Co-op, Siemens DISW

Milford, OH

Jan – Apr 2024, Aug – Dec 2024, May – Aug 2025

- Engineered 3 core features for Structure Variant Configuration in C++ and React, improving Teamcenter's data-retrieval efficiency and expanding user customization options.
- Built 2 Python automation tools for Teamcenter's BOM Agent AI using SOA API calls to extract rollup-report metrics, saving engineers 1+ hour per search.
- Debugged and maintained a full-stack enterprise codebase (C++/React) across Teamcenter's client and server layers, stabilizing feature releases within in-house frameworks.

Software Engineer Intern, Swingtech

Greenbelt, MD

May 2022 – Oct 2024

- Automated PII extraction from unstructured email streams in Python, reaching 90% accuracy and saving 10+ engineering hours weekly.
- Built an AI-driven grading web application in Python/Flask that evaluated student responses against configurable rubric criteria.
- Developed a Hospital Fire Safety VR training simulation in Unity/C#, modeling interactive emergency scenarios to reinforce staff safety protocols.
- Built a centralized web portal consolidating the innovation team's analytics pipelines and project metrics into a single dashboard.

Student Associate, VR Systems — University of Cincinnati

Cincinnati, OH

May 2026 – Aug 2026

- Built interactive multi-display VR educational software in C# for the CAVE (Cave Automatic Virtual Environment), synchronizing content across networked displays for classroom use.
- Calibrated and maintained spatial tracking hardware and cluster display systems supporting ongoing academic research applications.

PROJECTS

OMID USA — AI Farming Drone

Sep 2025 – Apr 2026

PyTorch, Google Cloud Run, Flutter, REST API

- Architected a REST API on Google Cloud Run to serve real-time inference from a custom PyTorch ResNet-18 model, containerized with Docker, achieving 90%+ accuracy in crop-pest identification.
- Integrated the pest-detection model into a cross-platform Flutter application as an embedded widget, managing persistent state and asynchronous API calls end-to-end.

Virtual Office Space — RevolutionUC Hackathon

Mar 2022

Unity, C#

- Co-developed a 3D VR environment in Unity/C# enabling interactive exploration of academic research; won the Digital Futures Storytelling Prize.
- Programmed scene transitions, navigation, and core interaction loops for a multi-user experience.
